DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on April 3rd. 2008 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1,3, 5 and 7-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Lee et al (US Patent 5,480,403).

Lee et al disclose a bioabsorbable copolymer of glycolide or lactide (**Column 4**, **Lines 22-29**) implantable cross-pin (**Figures 4-6**) comprising: an elongated member extending from the proximal end (**134**) to a distal end (half of the length of **Figure 5**); a bullet-shaped nose member (**131** and rest of **132**) extending out from the distal end of

the elongated member; an axial trough (135) in the elongated member; a guide wire opening (an end of 133) in the distal end of the nose member; and an interior tunnel having a passage with an enclosed circular perimeter (rest of 133) extending axially (both the perpendicular axial direction as well as longitudinal axial direction along 135). A guide wire (101) is seated in the axial trough and extends through the guide wire opening.

Claims 1, 3 and 7-9 rejected under 35 U.S.C. 102(e) as being anticipated by Supinski (US Patent 6,579,295).

Supinkski disclose (**Figures 4-8**) a bullet-shaped bioabsorbable (**Column 7**, **Lines 40-44**) device comprising: an elongated member (majority of **80** except for portion including **88**); a nose member (rest of **80** containing **88**); an axial trough (**82**); a guide wire opening (distal end of **88**); and an interior tunnel (rest of **88**) with an enclosed circular perimeter. A guide wire (**110**) is seated in the axial trough (must be due to location of hole in **100** in alignment with **88**).

Response to Arguments

Applicant's arguments filed April 3rd, 2008 have been fully considered but they are not persuasive. Applicant contends that the newly added limitation of a guide wire seated in the axial trough is not disclosed in either of the prior art references. With regard to Lee et al, the suture can be interpreted as being a guide wire as loosely recited in the claims. In Supinski, the "guide pin **110**" can also accurately be interpreted as a guide wire as well as being "seated in the axial trough" due to the hole it passes

Application/Control Number: 10/808,764 Page 4

through being located within the space (trough) defined by the cutout of the interpreted cross pin.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Richard Shaffer whose telephone number is (571)272-8683. The examiner can normally be reached on Monday-Friday (7am-5pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eduardo Robert can be reached on 571-272-4719. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
